

# Product Highlights

## Sensors for Commercial Spaceflight Applications

Today's advancements in the field of commercial space flight have created many opportunities for aerospace engineers to utilize Stellar Technology's board range of sensor products for their many applications. STI's pressure transducers and pressure transmitters, load cells, torque sensors, temperature transducers, displacement sensors and instrumentation provide measurement solutions for both in-flight and ground-support applications such as:

- Solid Rocket/Hybrid Rocket Motor Case Pressure
- Cryo/Non-Cryo Feed Line Pressure and Temperature
- Rocket Motor Thrust Test Stand Force
- Propellant Tank Level Measurement
- Crew Life Support System Air Pressure
- Hypergolic Feed Line Pressure and Temperature
- Inert Gas Blow-Down System Pressure
- Turbine Inlet/Exhaust Pressure and Temperature
- Launch Abort System/Flight Termination System Pressure
- Landing Gear Hydraulic Pressure
- Cooling System Pump Delta-Pressure
- Subscale Motor Chamber Pressure
- Zero Gravity Simulation Force

Space Rated Pressure Transducer

Aerospace Pressure Transducer

Differential Pressure Transducer

Pressure and Temperature Transducer

High Accuracy Pancake Load Cell

High Capacity/High Accuracy Canister Load Cell

Whether developing platforms for personal or commercial spaceflight, innovative companies are developing propulsion systems, spacecraft, launch vehicles, flight control systems, recovery systems and ground support systems that will place a premium on safety, reliability, efficiency, and cost. In each case, Stellar Technology's proven track record in providing space-rated sensor solutions to the space industry will help ensure the success of these commercial space initiatives.
